

# NEW ITEM AT **ELECTRICAL DISTRIBUTORS**

## Why Buy? "Smart Boxes"

### Reasons & Purposes

#### \*New work adjustable depth box for 1,2,3,4 gangs.

Used in kitchens & baths where tile, granite, marble etc. makes final wall surface questionable.

#### \*New work tight location box.

Used in locations where you cannot possibly swing a hammer.

#### \* New work user friendly box.

1) During finish work, a 6/32-device screw may snap off. Simply replace the box.

2) During finish work you may find the stud has twisted so the outer edge of the 3 or 4 gang box protrudes beyond the wall. Simply back out the interior mounting screws & adjust the box accordingly.

#### \*New work "smart house" box.

Every device that is installed in a smart box product, once removed, creates a window or opportunity to allow you to go back into those walls with no damage to perform upgrades, add circuits, or run low voltage lines. Use of a nail on box or any other box on the market today with a finished wall of tile, marble etc. entombs the wires in the wall. That is the equivalent to buying a brand new car and welding the hood shut.

#### \*Old work cut box.

1) Cut hole in sheet-rock alongside a stud & mount old work box to the stud as you would in new work construction for a secure mounting.

2) Old houses or aluminum wired houses: once wires are added, smart box is the only box on the market today that will fill that hole.

3) Avoid damaging wallpaper when upgrading interiors.

4) Easily exchanged when increasing from single gang to multiple gang boxes.

#### \* Shelf saver box.

No longer stock your shelves with 1,2,3 & 4 gang nail on boxes, cut boxes, bracket boxes, 25 gauge metal stud boxes or adjustable depth boxes: simply stock smart boxes & use this new found shelf space more wisely.

***P.S. The more you use  
Smart Boxes the  
Smarter you appear!!!***
